

Pronouns Point

Pronouns point to nouns with alternate names.

Pro means "for."
Pronoun means "for a noun."

Pronoun or Adjective?
When pronouns directly modify nouns, they become adjectives.

Pronoun
What is the time?

Adjective
What time is it?

Personal Pronouns

point to "people" nouns (except for *it* and *its*).

- I, me, my, mine
- you, your/s
- he, him, his
- she, her/s
- we, us, our/s
- they, them, their/s
- who, whom, whose
- it, its

Subjective Case

She has a toy.
They have a car.

Objective Case

The toy was *hers*.
The car was *theirs*.

Possessive Case*

Sue gave *her* toy away.
The Smiths drove *their* car.

*These pronouns become Possessive Adjectives.

Demonstrative Pronouns

point to specific nouns.

Singular

This, That

Plural

These, Those

This is the boy.
Those are the girls.

Interrogative Pronouns

point to nouns that are the answers to questions.

What, Which
Who, Whom, Whose

What is the time?
Who is there?
Tom saw *whom*?

Indefinite Pronouns

point to non-specific nouns.

Singular

Another, Each, One
Either, Neither

- Anyone / body / thing
- Everyone / body / thing
- Someone / body / thing
- No one / body / thing

Plural

All, Both, Few
Many, Several

Singular or Plural
Any, None, Some

Neither is poor.
Both are thin.
Sugar? *Some* is okay.
Fats? *Some* are okay.

Reflexive Pronouns

"reflect" the nouns they point to.

Singular

myself
himself
herself
yourself
itself

Plural

ourselves
yourselves
themselves

He saw *himself*.
They saw *themselves*.

Imagine a noun looking at its pronoun "reflection" in a mirror.

Relative Pronouns

link dependent clauses to nouns.

"Relatives" bring family members together!

Who, Whom, Whoever, Whomever
Which, That, Whatever, Whichever

Subjective Case

A boy **who tells lies** is dishonest.

Who is the subject of the dependent clause "who tells lies," which it links to the noun "boy."

Objective Case

Every boy **whom Tom named** was guilty.

Whom is the object of the dependent clause "whom Tom named," which it links to the noun "boy."
(To put it another way: Tom named *whom*.)

Observe how *who* & *whom* can be Personal, Interrogative, or Relative pronouns.

Antecedent

Antecedents are the **nouns** that pronouns point to.

Ante means "before" and *cede* means "to go." Think of an antecedent as an "ancestor" that exists or "goes before" its pronoun.

John wore his proudly.
His points to its antecedent noun *John*.

It was John's **ring**.
It points to its antecedent noun *ring*.

I found a **ring** outside. It was John's.
An antecedent can be in previous text.

It was John's.
If no antecedent appears in the current text, it is understood to exist from previous text.

Your Turn!

Match each pronoun to a category.

- | | |
|----------------------------|------------------|
| 1) ____ <i>these</i> are | a. Personal |
| 2) ____ <i>Which</i> is? | b. Demonstrative |
| 3) ____ <i>each</i> of | c. Indefinite |
| 4) ____ sees <i>itself</i> | d. Reflexive |
| 5) ____ <i>its</i> body | e. Interrogative |
| 6) ____ <i>few</i> attend | |
| 7) ____ to <i>anybody</i> | |
| 8) ____ <i>mine</i> are | |
| 9) ____ <i>that</i> is | |
