

Max Learning's Times Table Tricks & Tales

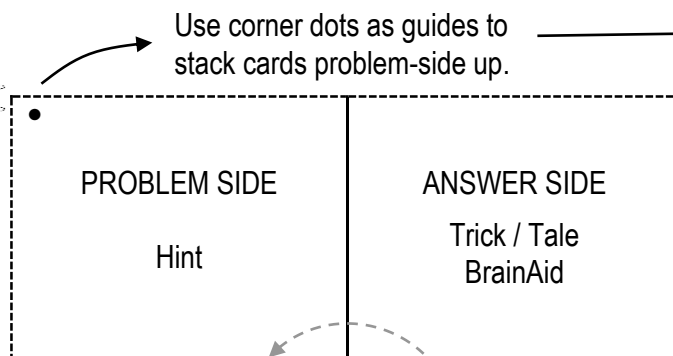

www.maxlearning.net/Math/MathHandouts/ArA-TTTT.pdf

Flash Card Basics

Print this handout, then:

Cut along dashed lines

BrainAid Memory hint (mnemonic), generally make-believe, to help you recall a procedure or technique.

Fold answer *under* problem along solid center line.

Multiplication = Fast Addition

Did you know that multiplication is really only addition? The advantage is it's *fast* addition. For example, what is $5 + 5 + 5 + 5 + 5$? It's 25 of course. But once you've *memorized* that $5 \times 5 = 25$, you'll save yourself loads of time! (Adding gives you a SUM. Multiplying gives you a PRODUCT.)

Tricks & Tales

The standard 12×12 Times Table displays 144 products to memorize. Whew! Instead, this packet has just 33 flash cards. You'll learn "tricks" for some multipliers and "tales" for the rest. Long before written languages existed, humans passed on knowledge through tales (stories), which are easier to remember than dry facts. Here are some of the key elements and characters you'll see on these flash cards:

x	1	2	3	4	5	6	7	8	9	10	11	12
1	1	2	3	4	5	6	7	8	9	10	11	12
2	2	4	6	8	10	12	14	16	18	20	22	24
3	3	6	9	12	15	18	21	24	27	30	33	36
4	4	8	12	16	20	24	28	32	36	40	44	48
5	5	10	15	20	25	30	35	40	45	50	55	60
6	6	12	18	24	30	36	42	48	54	60	66	72
7	7	14	21	28	35	42	49	56	63	70	77	84
8	8	16	24	32	40	48	56	64	72	80	88	96
9	9	18	27	36	45	54	63	72	81	90	99	108
10	10	20	30	40	50	60	70	80	90	100	110	120
11	11	22	33	44	55	66	77	88	99	110	121	132
12	12	24	36	48	60	72	84	96	108	120	132	144

Tree (3)

Sven (7)
the Swede

Twelvis (12)
Presley

COMMUTATIVE Property

H R u d
A D i t
N E t i
G R p i
E p l y o n

This "Change Order" property works for multiplication (and addition but not for division or subtraction), which reduces the number of flash cards needed—and your memorization task!

Once you learn one order, you know the other. For example, 4×7 is the same as 7×4 . And $9 \times 12 = 12 \times 9$ and so on.

Commutative [kuh-MYU-tuh-tiv] comes from the word *commute*, which means to *change*. (Avoid saying communative—there is no n.)

This cuts your learning time in half!

0 × number

$$0 \times \text{number} = 0$$

This is known as the Zero Property.

1 × number

$$1 \times \text{number} = \text{number}$$

Imagine "1" is a mirror that reflects the number.

This is known as the Multiplicative Identity Property.

2 × number

$$2 \times \text{number} = \text{number} + \text{number}$$

Double trouble!

$$2 \times 3 = 3 + 3 = 6$$

$$2 \times 4 = 4 + 4 = 8$$

$$2 \times 5 = 5 + 5 = 10$$

$$2 \times 6 = 6 + 6 = 12$$

$$2 \times 7 = 7 + 7 = 14$$

$$2 \times 8 = 8 + 8 = 16$$

$$2 \times 9 = 9 + 9 = 18$$

$$2 \times 10 = 10 + 10 = 20$$

$$2 \times 11 = 11 + 11 = 22$$

$$2 \times 12 = 12 + 12 = 24$$

5 × [4, 6, 8, 12]

I'm half the number you are!

Half Ten Trick

$$5 = \frac{1}{2} \times 10$$

Take Half Times Ten

$$5 \times 4 \quad \frac{1}{2} \times 4 = 2 \rightarrow \times 10 = \mathbf{20}$$

$$5 \times 6 \quad \frac{1}{2} \times 6 = 3 \rightarrow \times 10 = \mathbf{30}$$

$$5 \times 8 \quad \frac{1}{2} \times 8 = 4 \rightarrow \times 10 = \mathbf{40}$$

$$5 \times 12 \quad \frac{1}{2} \times 12 = 6 \rightarrow \times 10 = \mathbf{60}$$

9 × [2, 3, 4, 5, 6, 7, 8, 9]

#

$$\begin{array}{c} \downarrow \\ \square + \square = 9 \end{array}$$

1-Less, Add-to-9 Trick

- Subtract 1 from the number.
- Add to the result to make 9.

$$\begin{array}{r} 9 \times 4 \\ \downarrow \\ 3+6=9 \\ \textcircled{36} \end{array}$$

$$\begin{array}{r} 9 \times 6 \\ \downarrow \\ 5+4=9 \\ \textcircled{54} \end{array}$$

Check

$9 \times 2 = 18$	$1+8=9\checkmark$
$9 \times 3 = 27$	$2+7=9\checkmark$
$9 \times 5 = 45$	$4+5=9\checkmark$
$9 \times 7 = 63$	$6+3=9\checkmark$
$9 \times 8 = 72$	$7+2=9\checkmark$
$9 \times 9 = 81$	$8+1=9\checkmark$

10 × number

$$10 \times \text{number}$$

Float the Bubble Trick

Move zero from 10 to the right side of the number

$$\begin{array}{r} 10 \times 4 \\ 1 \times 40 \\ \textcircled{40} \end{array}$$

$$\begin{array}{r} 10 \times 12 \\ 1 \times 120 \\ \textcircled{120} \end{array}$$

11 × [2, 3, 4, 5, 6, 7, 8, 9]

Imagine "11" is a DOUBLE mirror that reflects the number twice.

- 11 x 2 = 22
- 11 x 3 = 33
- 11 x 4 = 44
- 11 x 5 = 55
- 11 x 7 = 77
- 11 x 8 = 88
- 11 x 9 = 99

11 × [11, 12]

Smash & Add Trick

Smash then separate digits. Place sum between.

3 × 4

$$\begin{array}{cccc}
 1 & 2 & 3 & 4 \\
 \swarrow & \swarrow & \swarrow & \swarrow \\
 12 & = & 3 \times 4 &
 \end{array}$$

•

$$7 \times 8$$

5 6 7 8

$$\begin{array}{cccc} 5 & 6 & 7 & 8 \\ \swarrow & \swarrow & \swarrow & \swarrow \\ 56 & = & 7 & \times & 8 \end{array}$$

•

$$3 \times 3$$

Tree (3) after tree (3)
was pine (9).

$$3 \times 3 = 9$$

•

$$3 \times 5$$

5 10 ?

Count 3 fives

1 2 3
5 10 15

$$3 \times 5 = 15$$

$$6 \times 3$$

Sick (6) tree (3)
ate teen (18).

$$6 \times 3 = 18$$

$$7 \times 3$$

Sven (7) in tree (3)
had plenty fun (21).

$$7 \times 3 = 21$$

$$8 \times 3$$

I ate (8) a tree (3)
but there were
plenty more (24).

$$8 \times 3 = 24$$

$$12 \times 3$$

Twelvis' (12) tree (3)
was pretty sick (36).

$$12 \times 3 = 36$$

$$4 \times 4$$

Shots for (4) four (4)
sick teens (16).

$$4 \times 4 = 16$$

$$6 \times 4$$

I was sick (6) for (4)
twenty-four (24) hours!

$$6 \times 4 = 24$$

$$7 \times 4$$

Sven (7) at (4) pm
was plenty late (28).

$$7 \times 4 = 28$$

$$8 \times 4$$

If you ate (8)
off the floor (4)
you'd be dirty, too (32).

$$8 \times 4 = 32$$

$$12 \times 4$$

Twelvis (12) sang
for (4) the
food he ate (48).

$$12 \times 4 = 48$$

$$5 \times 5$$

Two fives = Two five

$$5 \times 5 = 25$$

$$7 \times 5$$

Sven (7) dived (5)
into a
dirty hive (35).

$$7 \times 5 = 35$$

$$6 \times 6$$

I was so
sick (6) sick (6)
I was dirty sick (36).

$$6 \times 6 = 36$$

$$7 \times 6$$

Sven (7) was sick (6) enough for two (42).

$$7 \times 6 = 42$$

$$6 \times 8$$

I felt sick (6) after I ate (8) enough for eight (48).

$$6 \times 8 = 48$$

$$12 \times 6$$

Twelvis (12) got sick (6) from Sven, too (72).

$$12 \times 6 = 72$$

$$7 \times 7$$

The Sven twins (7, 7)
arrived
for tea time (49).

$$7 \times 7 = 49$$

$$7 \times 12$$

Sven (7)
and Twelvis (12)
ate before (84).

$$7 \times 12 = 84$$

$$8 \times 8$$

I ate (8) and I ate (8)
'til I was
sick on the floor (64).

$$8 \times 8 = 64$$

12×8

Twelvis (12) ate (8) spoiled food and got mighty sick (96).

$$12 \times 8 = 96$$

Extra tip: Think "One more than 8 = 9."

12×9

Twelvis (12) dined (9) while the hungry ate (108).

$$12 \times 9 = 108$$

Extra tip: Think "One more than 9 = 10."

12×12

The Twelvis twins (12,12) went one for four (144) in the tournament.

$$12 \times 12 = 144$$
